

The presentations included on this disk were originally given as part of the ‘Ship Fouling and Biological Invasions’ Session of the 11th International Congress on Marine Corrosion and Biofouling. The session was organized by Richard Everett (US Coast Guard), Dorn Carlson (NOAA/Sea Grant), and Eric Holm (Naval Surface Warfare Center), with funding from the USCG, Sea Grant, and the Office of Naval Research. The order of the presentations is reproduced below (entries are the appropriate file names), with one change – the introductory remarks were given after Robert Whitlatch’s keynote presentation on the ecology of macrofouling organisms. The introductory remarks are placed first on the itinerary below, in order to provide some context for the presentations.
